Account Investigation Case Report

Case field	Value
Case account	AML_ACC_25
Dataset	IBM AMLSim Sample Dataset (ibm_amlsim)
Generated at	2026-10-16 13:46 UTC
Graph traversal depth	3
Investigation label	HIGH (isFraud=True)
Transaction count	19
Flagged transaction count	19
Graph nodes	59
Graph relationships	75

Scope and limitation: IBM AMLSim transaction simulation data. Device/IP and merchant relationships are not present in this schema. A risk label or flagged transaction is a review signal, not a determination of criminal activity.

Investigation Finding

IBM AMLSim account with 12 counterparty connection(s).

System warning: IBM AMLSim transaction simulation data. Device/IP and merchant relationships are not present in this schema. Signals reflect transaction counterparties and shared alerts.

Assistant limitation: IBM AMLSim synthetic data. Suspicious and isFraud labels are simulation flags, not confirmed criminal findings. Graph connectivity does not prove a coordinated fraud ring.

Audit Notes

This report was generated from the API responses available at the time of export. It is not a forensic certification or an automated determination of fraud. Analysts should verify source records, consider alternative explanations, and follow their organization's review and escalation procedures.
