FRAUDTRACE AI

Account Investigation Case Report

Case field	Value
Case account	ACC002
Generated at	2026-10-16 12:38 UTC
Graph traversal depth	3
Investigation label	medium
Transaction count	1
Flagged transaction count	1
Graph nodes	12
Graph relationships	15

Scope and limitation: This report summarizes the evidence returned by the FraudTrace AI demonstration system. A risk label or flagged transaction is a review signal, not a determination of criminal activity. Shared devices, IP addresses, or merchants can have legitimate explanations.

Investigation Finding

Multi-hop connected-account pattern found

System warning: Connections are investigation leads, not proof of fraud. Shared devices and IP addresses can have legitimate explanations.

Related Accounts

1. ACC001
2. ACC003
3. ACC006

Shared Device Signals

1. DEV001
2. DEV002

ACC002	USES_DEVICE	DEV002
ACC002	USES_DEVICE	DEV001

Investigation Assistant

Question: Why is this account suspicious?

Assistant Findings & Analysis:

Why ACC002 is considered suspicious (based on the current graph evidence)

1. **Stored risk label** - The system's stored risk label for ACC002 is **"medium,"** indicating that the account is already flagged for closer review.
2. **Connected-account relationships** - ACC002 is linked to three other accounts through shared infrastructure, which creates investigation leads:

- **ACC001** - ACC002 shares a device (**DEV001**), an IP address (**IP001**), and a merchant (**MER001**) with ACC001. This link has a **HIGH** review priority[EV-LINK-ACC001].
- **ACC003** - ACC002 shares a device (**DEV002**) and an IP address (**IP002**) with ACC003 (review priority **MEDIUM**)[EV-LINK-ACC003].
- **ACC006** - ACC002 also shares the same device (**DEV002**) and IP address (**IP002**) with ACC006 (review priority **MEDIUM**)[EV-LINK-ACC006].

The multiple shared devices and IPs suggest that these accounts may be operating from common infrastructure, which is a typical fraud-investigation signal.

3. **Flagged transaction** - ACC002 has a single transaction of **$8,700** to merchant **MER001** that is marked **flagged**[EV-TXN-TXN002]. A high-value flagged transaction further raises suspicion.

Together, the medium stored risk label, the network of shared devices/IPs (especially the high-priority link to ACC001), and the flagged high-value transaction provide the primary reasons why ACC002 is considered suspicious in the current investigation.

Assistant Evidence

type	account_id	signals	shared_devices	shared_ips	common_merchants	review_priority
connected_account	ACC001	["shared_device", "shared_ip", "shared_merchant"]	["DEV001"]	["IP001"]	["MER001"]	HIGH
connected_account	ACC003	["shared_device", "shared_ip"]	["DEV002"]	["IP002"]	[]	MEDIUM
connected_account	ACC006	["shared_device", "shared_ip"]	["DEV002"]	["IP002"]	[]	MEDIUM
transaction	Not provided	Not provided	Not provided	Not provided	Not provided	Not provided

Assistant limitation: FraudTrace AI uses synthetic demonstration data. Shared devices, IP addresses, merchants, and flagged transactions are investigation leads, not proof of fraud. Historical memories are observations, may become outdated, and are not verified facts.

Audit Notes

This report was generated from the API responses available at the time of export. It is not a forensic certification or an automated determination of fraud. Analysts should verify source records, consider alternative explanations, and follow their organization's review and escalation procedures.
